

Statement from Prof. Ivan Dimov, Deputy Minister of Education and Science of the Republic of Bulgaria and Head of Delegation at the 1st International Space Forum at Ministerial Level in Trento on 24th October 2016

Bulgaria has a serious contribution in the main things which are based on the importance of space technologies.

The specialization of each small or large country is important. Importance of the collaboration.

The data processing – modern techniques for data-assimilation. Is needed an international cooperation and efforts in order as not to overloads the databases (scientific cloud, open access).

The cyber security is a very important aspect because as a general rule cloud technologies are difficult to defend from cyber-attacks.
