

IV SpaceLand Forum

Mauritius, 15-17 December 2018

Humanizing Space, Microgravity, Technology & Science for the Space 3-G: Generation, Gender, Geography

Applications by email to SpaceLand@SpaceLand.it

www.SpaceLand.it

Sustainable progress and socio-economic development imply research; research implies creativity and produces business: techno-science research programs in weightlessness, Mars-gravity and Moon-gravity, such as the SpaceLand ones involving elderly, kids and disabled, can support that equation, triggering innovative socio-economic development and a myriad business opportunities.

Microgravity and low-G environments provide unprecedented conditions and capacities for *state-of-the-art* pharmaceutical, biomedical and material sciences research, as well as multi-disciplinary technology innovation opportunities for new human-rated and robotic systems, also for critical, tele-controlled and/or automated applications and spin-off's in remote or harsh environments.

This approach also fosters both education and commercially-driven research leading to new products and services to be developed by innovative entrepreneurs and the high-tech enterprises, creating highly-skilled labour-intensive jobs to benefit the whole society, also to enhance the quality of life for the weak social classes and the 3-G communities: this is the context for the *4th SpaceLand Forum*, endorsed by top-level institutions such as the *200-Countries & 27000 subscribers-strong* International Astronautical Federation "IAF" and the National Engineering Board of Torino (Italy).

Including an original *networking & star-gazing night-meal* on one of the most beautiful beaches of the planet, the meetings and presentations envisaged for the Forum will be from the 15th to the 17th of December 2018 on the marvellous main island of Mauritius; the events follow on successful symposia by SpaceLand in Europe, held with the support of the European Commission's V-President and many other international institutions (see for instance <https://www.asi.it/it/eventi/convegni/spaceland-expo-congress>).

The Forum will bring together stakeholders, investors, scientists and techno-science industry to examine, consider and collaboratively stimulate with youngsters and young professionals a myriad inter-disciplinary perspectives on space and microgravity-related techno-scientific matters, especially for the sustainable development of African and Asian regions: Space Policies, Business and Entrepreneurship, Space outreach and STEAM (Science, Technology, Engineering, Arts and Medicine), United Nations' Sustainable Development Goals (SDGs) and Capacity-Building programs for Africa and the Indian Ocean will be among the main topics of the event.

As detailed in the next page, emphasis will be also given to the so-called *3-G challenges and opportunities* (Gender, Geography, Generation) and to the innovative design for research and education centers with underwater & ground facilities for Moon-gravity and Mars-gravity, such as the ones of the Mars-habitat-looking SpaceLand Center planned in the region also to support aerospace tourism.

Recommendations to relevant public, private and non-governmental sectors will be made, helping to shape the future of the African and Indian Ocean-facing Countries, also to forward proposals to the U.N. about the involvement of both the above players and the young generations in these programs, updating the presentation at the U.N. - UAE High-Level Forum in Dubai in November 2017 by Doct. Carlo Viberti, NASA/ESA Zero-Gravity Research Flight Veteran, and the Head of State (<https://youtu.be/2RthuFMcdfg>)

Set the date for 15-17 December 2018: welcome to Mauritius, your first SpaceLand !

<http://www.iafastro.org/evenements/4th-spaceland-forum/>

4th SpaceLand Forum

15-17 December 2018

Mauritius

Program topics

The SpaceLand group has set several *world-records* such as preparing underwater and bringing the **world's first person with disabilities** (Elma Schippa, in April 2005, paving the way to Stephen Hawking's flight), the **world's oldest man** (93-year-old Cesare Massano, in 2007) and the **world's youngest kid** (Carlo Viberti's son, namely 11-year-old Kim Marco Viberti, in 2008) to fly as *science research test subjects* and *technology test-operators in weightlessness* for major research programs taking off from the **NASA Space Shuttle Landing Facility** at Cape Canaveral in the past decade.

Such results contribute to demonstrate that "**humanizing Space, Microgravity, Technology and Science**" is possible; moreover, this goal is also essential to bring citizens closer to the state-of-the-art knowledge, enhancing everybody's quality of life thanks to the opportunities and benefits of Space and microgravity R&D programs.

In this respect,

speakers and key-notes being inserted in the program of the 4th SpaceLand Forum will mainly cover the following topics:

3-G aerospace and STEM disciplines: Gender, Generation, Geography

- women from the Earth to Mars: from construction of ground facilities to planetary habitats, from female designers to payload specialists & astronauts ;
- the young generations toward Mars: lessons learnt with pioneers of Space and Microgravity programs ;
- international opportunities to support Africa's future in Aerospace-related STEM: business and entrepreneurs ;
- 3-G opportunities in the Zero-G, Moon-G and Mars-G facilities being developed in Mauritius.

You are welcome !

Participants will be given an *e-voucher* for discounted accommodation at a few meters from the crystal-clear sea.

Accommodation for low-budget delegates might be found for as low as 25 EUR per night

- Application fee for all participants and speakers: within 1 October 2018: 150 EUR, after 1 October 2018: 190 EUR
- Students below 22 years of age: 50% reduction over above fees
- 55 EUR for gala dinner & networking beach party
- Forum co-organizer: 1 free-of-charge speaker and external communication, provided that two commercial or institutional sponsors are secured
- Commercial or institutional sponsor: a contribution of 3000 EUR is requested

Please mention name, institution on wire-transfer to SpaceLand Italia, IBAN: IT51 Q060 8530 4100 0000 0023 352

See you in Mauritius !

Please send proof of payment and any info request to SpaceLand@SpaceLand.it
