

SPACE ECOSYSTEM INTELLIGENCE PLATFORM

YANKHO LIKAKU – RIIS

📍 ANTALYA, TURKEY

📅 2 – 3 OCTOBER 2026

A COORIDNATED PLAN FOR SPACE SECTOR GROWTH

All space sectors, especially emerging space sectors and ecosystems face similar problems that affect the possibility of a unified approach for growth.

01 FRAGMENTED EVIDENCE

Sector data is missing or scattered across sources, making it difficult to assess readiness, identify gaps and guide investment.

02 PARTICIPATION UNCLEAR

Ecosystem actors lack a shared understanding of who is involved, their roles and where they can contribute or collaborate.

03 MINIMAL PROOF OF CONCEPTS

Emerging businesses have limited opportunities to test solutions, demonstrate their value and build the evidence needed to attract customers and investment.

04 SECTOR PRIORITIES UNCLEAR

Without agreed priorities and a coordinated roadmap, actors struggle to focus resources, assign responsibilities and turn opportunities into actionable projects.

05 STRATEGIC NETWORKING

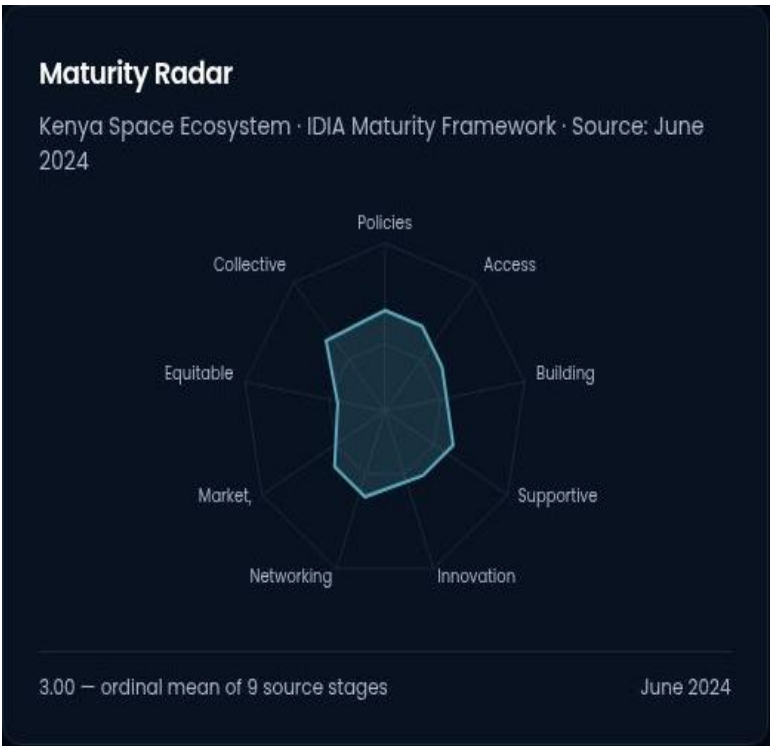

Actors need stronger connections with decision-makers, innovators and investors to form partnerships, access markets and advance shared sector goals.

One end-to-end Platform and Workspace for evidence actors, action and monitoring

Partnering with us to deliver Karman Week South Africa offers a range of strategic benefits that connect your brand, expertise, and mission to a global community shaping the future of the space sector.

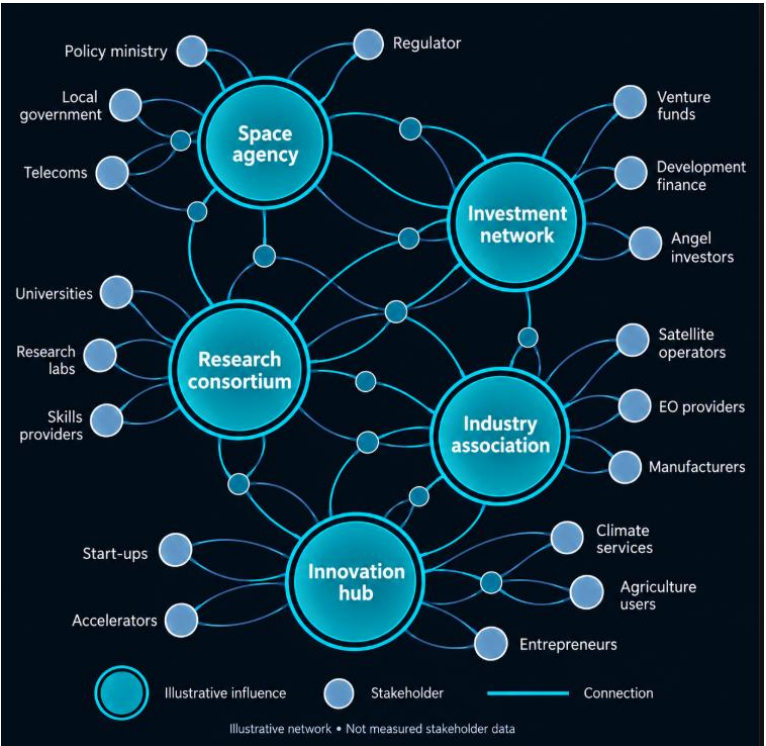

ASSESS SECTOR MATURITY

Reveal ecosystem strengths, gaps and opportunities through dashboards, maturity radars and SWOT analyses, helping every actor see where they can contribute.

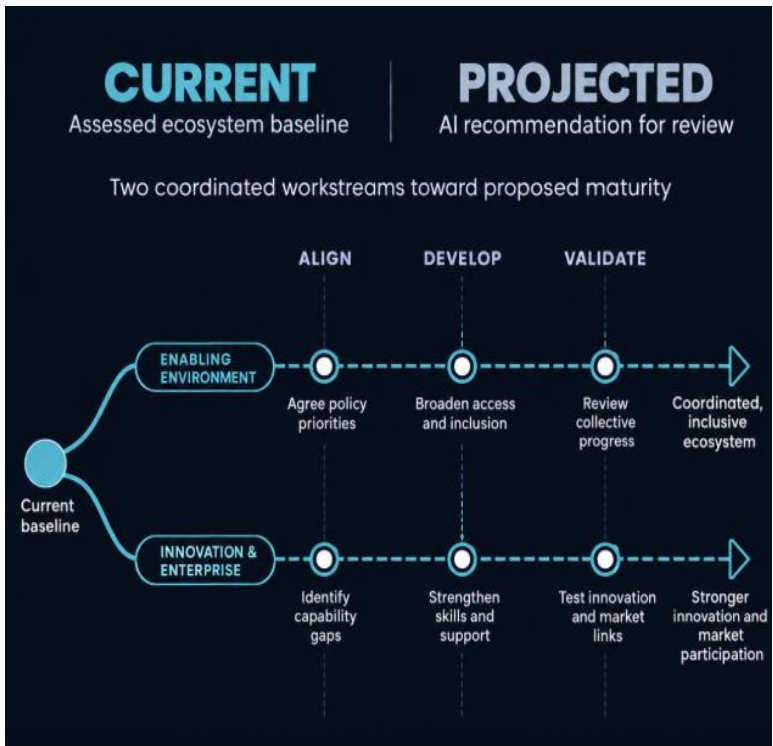

MAP PARTICIPATION

Discover active stakeholders, their offerings and where collaboration can unlock value. Identify partners across government, industry, research, investment and entrepreneurship.

EXPLORE AND PLAN GROWTH

Turn shared ambitions into coordinated roadmaps. Explore evidence-based AI growth paths, with priorities and opportunities that matter to your ecosystem.

DESIGN PILOT PROJECTS

Turn evidence into pilot concepts that address real needs. Define partners, responsibilities and success measures to test solutions, demonstrate value and build a case.

EXPLORE A PILOT WITH RIIS

SEIP PRESENTATION | UNOOSA – IAF WORKSHOP

Partner with RIIS to shape a platform around your ecosystem's priorities.

Bring your challenges, expertise and ambition. We will work together to turn evidence into clear decisions, stronger partnerships and practical projects.

01 DEFINE YOUR PRIORITY

Identify the ecosystem challenge that matter to and affect the ecosystem the most. Together, we will focus the assessment and establish a baseline to guide action.

02 AGREE THE PILOT SCOPE

Choose the evidence, partners and outcomes that will inform and share the pilot execution. Together we will agree on responsibilities and success measures, so every participant knows how to contribute.

03 BUILD A SECURE PLATFORM

Co-design a platform that fits your institutional technology, branding, security and data requirements, with agreed safeguards for access and information sharing.

04 DEVELOP THE PILOT TOGETHER

Turn identified priorities and maturity assessments into a practical roadmap and eventually pilot projects that move the needle of progress in the space ecosystem. Deliberately shape the approach, test its value and build evidence that supports wider adoption and investment.
