

Building Africa's Space Future

The missing link is not interest. It is the pathway from interest to capability.

EVIDENCE FROM ETHIOPIA

5,000+

students engaged

15

cities reached

600+

university students
in structured programs

The demand is visible. The pathway is the bottleneck.

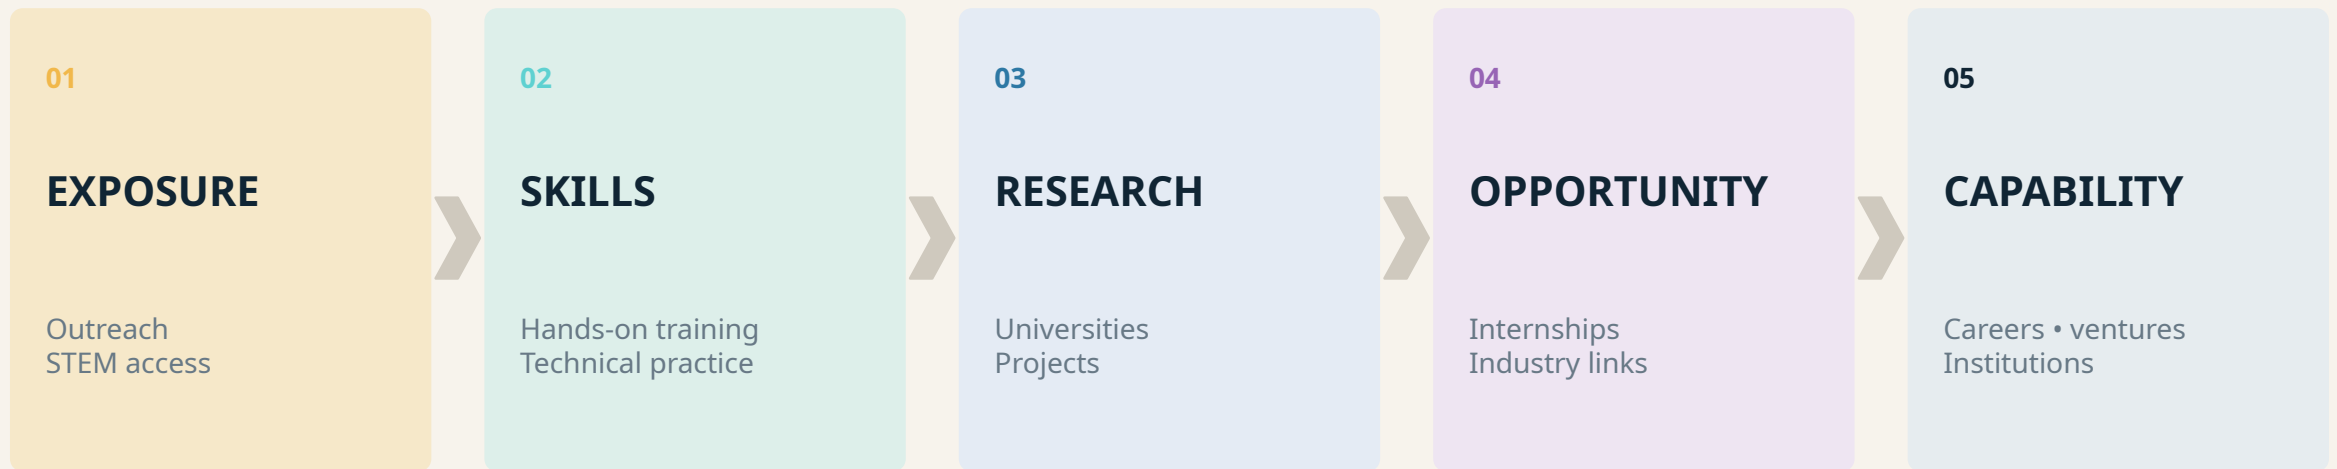

Rani M. Kassa

Managing Director, African Aeronautics and Astronautics Center

AAAC • Ethiopia Space Science Society (ESSS)

Events spark interest. Pathways build capability.

The ecosystem works only when talent can keep moving forward.

THE LESSON

The goal is continuity: from first exposure to real economic participation.

When one link is missing, talent stalls. When the links reinforce one another, capability compounds.

Build the next link with us.

Partnership should strengthen the pathway not add another isolated event.

WHAT WE BRING

Local delivery • student networks • university relationships • program experience

THREE CONCRETE WAYS TO PARTNER

- **Universities & research labs** Joint research • mentorship • exchanges
- **Space agencies & industry** Technical training • internships • real projects
- **Funders & international partners** Scale what works • connect talent to opportunities

If your institution can strengthen one link in this pathway, I would like to speak with you after this session.

Events spark interest. Connected pathways build capability.
