

## INTERNATIONAL ASTRONAUTICAL FEDERATION

FOR IMMEDIATE RELEASE

### **GLEX 2021 RECEIVES EXTRAORDINARY +570 ABSTRACTS FROM 59 COUNTRIES!**

The International Astronautical Federation (IAF) is honored to announce that the GLEX 2021 Call for Abstracts lead to an overwhelming response from the global space community! The number of returns has been extraordinary! Extraordinary not only in terms of quantity with **over 570 received abstracts from 59 countries**, since the sheer number is not saying much about the quality. Looking over the abstracts, it will be no easy task for the GLEX 2021 International Programme Committee to choose among these excellent abstracts. Authors will hear of the outcome within the next three weeks.

This surge in entries (**+30%** compared to the GLEX 2020 abstract submission rate) is evidence of the considerable interest going on due to recent developments and outstanding achievements in space. GLEX 2021 is a remarkable occasion where the global space community is invited to meet and re-connect on the **60<sup>th</sup> anniversary of Yuri Gagarin's Space Flight** to reflect on the trends, challenges and opportunities in space exploration.

With **36 Technical Sessions spanning 12 tracks**, the GLEX 2021 Technical Programme is designed to cover all aspects of space exploration and its related disciplines. The conference will be the ultimate place to discover the latest projects, technologies and cooperation opportunities while showcasing the most influential and thought-provoking leaders and thinkers in space exploration today.

Registration is now opened: Visit <https://www.iafastro.org/events/global-series-conferences/glex-2021/glex-2021-registration-fees.html>
