Organizers

Centro de Investigación y Difusión Aeronáutico-Espacial (CIDA-E)

The Centro de Investigación y Difusión Aeronáutico-Espacial (CIDA-E) was founded in 1975 in Montevideo, Uruguay. It is an advisory department of the National Aviation Authority (DINACIA).

The International Astronautical Federation (IAF)

Connecting @ll Space People

Founded in 1951, the International Astronautical Federation is the world's leading space advocacy body with 343 members in 68 countries, including all leading space agencies, companies, research institutions, universities, societies, associations and institutes worldwide.

Following its theme "A space-faring world cooperating for the benefit of humanity", the Federation advances knowledge about space, fostering the development and application of space assets by promoting global cooperation.

As organizer of the annual International Astronautical Congress (IAC) and other thematic meetings, the IAF actively encourages the development of astronautics for peaceful purposes and supports the dissemination of scientific and technical information related to space.

Be part of the conversation on #GLAC2018

21 - 23 May 2018 | Montevideo, Uruguay

GLOBAL SPACE APPLICATIONS CONFERENCE (GLAC 2018)

www.glac2018.org

Welcome to GLAC 2018!

It is with great pleasure that we welcome you to our upcoming event in the IAF Global Conferences series, the Global Space Applications Conference, GLAC 2018, to be held in Montevideo, Uruguay. This will be the first time ever that IAF takes one of its Global Conferences to South America and also the first time that it organizes an event in Uruguay. GLAC 2018 is co-organized together with our colleagues Centro de Investigación y Difusión Aeronáutico-Espacial (CIDA-E), a member of the IAF since 1985 and one of nine IAF members from South America.

This conference will be a follow up on GLAC 2014 which was organized in Paris, France. During the 4 years since the previous GLAC, the international satellite-based applications community will have significantly moved forward with their respective planning and developments and it is therefore timely to take stock of the progresses and undertake an outlook to the future of space applications on a global scale, with a specific focus also on developing space nations, such as Uruguay.

GLAC 2018 is designed to encouraging the sharing of programmatic, technical and policy information, as well as collaborative solutions, challenges, lessons learnt, and paths forward among all nations with the desire to improve space applications and their usage.

We encourage you to attend another successful IAF Global Conference in Uruguay!

Jean-Yves Le Gall, President, International Astronautical Federation (IAF)

Pascale Ehrenfreund, Vice President for Communications, Publications and Global Conferences, International Astronautical Federation (IAF)

Welcome from CIDA-E

Dear delegates and participants,

From 21 to 23 of May 2018, it will be held in Montevideo, Uruguay, the Global Space Applications Conference (GLAC 2018), co-organized by the International Astronautical Federation (IAF) and the Centro de Investigación y Difusión Aeronáutico-Espacial (CIDA-E).

This is the first Global Conference that will take place in Latin America.

The topic of Space Applications has already been considered in GLAC 2014, so GLAC 2018 will be a follow-up to the Paris conference.

Taking into account that Uruguay is mainly an agricultural country, CIDA-E deemed opportune that the topic of space applications would focus mainly on this sector. It goes without saying that space technology is an invaluable tool to prevent risks that can threaten agricultural production and to preserve natural resources as well.

For that reason topics like farming and fishing, integrated risk management, climate, natural resources, mapping and legal issues, have been incorporated for discussion.

There will be an exhibition, in which companies, industries, agencies and organizations linked to the space sector, will present their current programs and the latest advances and innovations in space technology.

The fact that this Conference is held in Montevideo will allow local scientists, technicians, experts, young students and professionals, to learn about new developments in the area of space technology. Also, they will have the privilege to interact with leading international representatives from space agencies, industry and academy, who will find in this region opportunities to exchange experiences and explore the possibility of starting or deepening cooperative relationships.

We are confident that GLAC 2018 will be a unique opportunity to strengthen the links between Latin America and the rest of the world in the field of space applications.

We look forward to meeting you all in Montevideo at GLAC 2018!

Marta Gaggero, Chief Counsel, Centro de Investigación y Difusión Aeronáutico-Espacial (CIDA-E)

Welcome from IPC Co-Chairs

Dear colleagues,

We are very glad to invite you to the 2nd Global Space Applications Conference – GLAC 2018 in Montevideo, Uruguay.

The first GLAC took place in Paris in 2014 and after the success of the event it was decided to hold a follow-on conference in Latin America. GLAC 2018 will take place on May 21 – 23 and we encourage you to participate in the Conference. We are currently preparing a very diverse programme which will attract stakeholders from various industries. The conference will gather representatives of space agencies, industry, academia and other stakeholders from all over the world and it will be a great instance to network and find collaboration opportunities.

Space companies, ranging from startups to big corporations, are providing services for various sectors, including agriculture, farming, mining, fishing, transport, energy and others. The GLAC 2018 is strategically located at Uruguay a country in South America whose main industry is farming and agriculture. Therefore space applications can massively help Uruguay and the countries of the region. GLAC 2018 will provide a platform to make countries aware of the benefits of space applications for their industries.

Please join us this year at GLAC 2018 in the city of Montevideo, capital city of Uruguay to generate a positive impact with Space Applications.

Roberta Mugellesi-Dow, Chair of the Committee on Integrated Applications, International Astronautical Federation (IAF), Integrated Applications Manager, European Space Agency (ESA)

Victoria Alonsopérez, Special Advisor to IAF President (Next Generation), International Astronautical Federation (IAF), Founder of Chipsafer

Accommodation

- Radisson Victoria Plaza Hotel
- Holiday Inn Hotel
- Orpheo Express Hotel
- NH Montevideo Columbia

Venue

Radisson Montevideo Victoria Plaza Hotel
Address: Plaza Independencia 759,
11100 Montevideo, Uruguay

Please book your accommodation at:
www.iafastro.org/events/global-series-conferences/glac-2018/venueaccommodation/

Conference Objectives

The conference will gather representatives of space agencies, industry, academia and other stakeholders from all over the world to network and find collaboration opportunities.

Space companies, ranging from startups to big corporations, are providing services for various sectors, including agriculture, farming, mining, fishing, transport, energy and others.

The GLAC 2018 will strategically take place in Uruguay and will provide a platform for the countries of the region and worldwide to raise awareness about the benefits of space applications for their socio-economic development.

The comprehensive programme will include high-level keynotes, round tables as well as dedicated sessions for young professionals and students that will address the most recent achievements in satellite-based applications and explore how industry, politics, and law will help shape the future of this exciting domain of astronautics.

Conference Programme

The GLAC 2018 is an excellent opportunity to review the state of the art of satellite-based applications, with a focus on:

- Farming and Fishing
- Integrated Risk Management
- Climate
- Natural Resources
- Mapping
- Legal Regulations
